AGEING, ACNE AND MARKS TREATMENTS

MULTI PEEL

OTI PEELING COMPOUND

This is a keratolytic peeling that acts on both melanin deposits and synthesis, and on seborrhoeic skin.

*Surface/Medium Peeling
Pigmentation (marks) regulator*

Composition:

Glycolic Acid 50%, Phytic Acid, (Anti-oxidant), Alpha Lipoic Acid

ALA (Alpha Lipoic Acid) is an ideal anti-oxidant as it is both liposoluble and hydrosoluble and carries out ubiquitous action, on both the intra and extra cellular matrix and inside each cell.

- Anti-inflammatory action;
- Normalization of sebaceous gland secretion;
- Reduction of size of skin pores;
- Improvement of post-acne scarring

INDICATIONS

Deep marks, Actinic Keratosis, Melasma, Hyperpigmentation, Ageing, Acne, Seborrhoeic Skin.

Glycolic Acid

This is a natural low-molecular weight molecule that allows penetration and absorption by the skin. It is an inhibitor of Tyrosinase. When associated with Phytic Acid, it acts on intra-epidermal melanin deposits and on dermo-epidermal melanin synthesis.

Phytic Acid

This acid inhibits melanogenesis due to its binding capacity with copper and the fact that it is thus no longer available for Tyrosinase. Marks will disappear progressively, as it will be skin itself that removes them through normal cellular change.

USE PROTOCOL

1. Cleanse the skin with our **DLactic Soft Cleanser**, which removes dead cells and sebum (apply to dry skin, massage and then rinse with water and dry).
2. Apply **OTI peeling compound gel** to face and neck using a brush and leave for 1 or 2 minutes (do not wait for red rash to form).
3. Rinse with water.

FREQUENCY OF APPLICATION

Repeat treatment every 20 days (light repeated treatments are preferable to aggressive treatments).

Home Treatment

From 1st to 8th day

1. Wash face with Delicate Neutral Soap.
2. Apply **Oti Revital cream**.

From 8th to 20th day

The therapy is carried out according to the pathology:

Revitalisation:

Apply **Oti Revital cream** in the morning.

Marks:

Apply **Oti Revital cream** in the morning.
Apply **Oti Spot Cream** in the evening.

Acne:

Apply **Oti Revital cream** in the morning.
Apply **Oti Impur Gel** in the evening.

OTI DLACTIC SOFT CLEANSER PRE-PEELING SOAP

Cleanser formulated for an excellent, delicate and effective cleansing of skin, without affecting natural acidity of skin surface.

Light cleanser for face and body, recommended for oily skins, skin affected by acne, mature and problematic skin.

Prepares skin for application of later treatments as it aids the absorption of the active principles.

The formulation of this cleanser allows:

- Triple action (exfoliating, cleansing, moisturising);
- Removes excess sebum;
- Leaves skin soft and bright;
- Does not dry skin;
- Recommended for all types of skins.

Lactic Acid: the best of AHA favours the exfoliation of the corneum layer cells and dead cells that block the sebaceous follicle, thereby freeing it, it stimulates the cellular turnover without damaging healthy cells, alleviates irregular skin pigmentation, improves hydration, increasing skin's plasticity, and also increasing synthesis of GAG.

Salicylic Acid: carries out actions similar to those of the AHA, but is more selective in its action. Its main applications foresee the treatment of acne, solar keratosis, skin thickening. It increases permeability of the corneal layer, aiding penetration of cosmetic agents through the lipidic barrier, it performs an especially effective anti-ageing action stimulating the deeper epidermis layers.

Apply to skin, massage delicately and rinse with water or face towels.

OTI MANDELICPRO

FLUID GEL

Ease of handling of Mandelic Acid, marked anti-bacterial action and prevention against sovrainfections, possibility of carrying out treatment in summer period too.

Mandelic Acid 50%

INGREDIENTS

Mandelic acid, Propylene glycol, Etoxydiglicol, Aqua.

INDICATIONS

Acne, Seborrhoeic skin , Photo-aging, Dyschromia.

PROTOCOL

Cleanse skin well with specific cleanser. Rinse with water and dry thoroughly. Apply Mandelic Acid to area to be treated and leave to act until a slight erythema has formed (rare); if no erythema appears, rinse in any case with abundant amounts of water after 10-20 minutes. Apply a moisturising cream. Repeat application after 15 days. Repeated peeling treatments are extremely useful for some indications such as acne, melasma and damage from photo-aging.

PRECAUTIONS

Minimal, given the fact that Mandelic Acid is easy to handle.

OTI PEELING PROFESSIONAL CREAM

PROFESSIONAL CREAM

Combines the efficacy of several active principles that make it an active treatment for acne, marks of various kinds and making skin appear younger.

Retinyl Palmitate, Ascorbyl Palmitate, Azelaic Acid, Arbutin

INDICATIONS

Deep marks, Acne, Chloasma, Melasma, Hyperpigmentation, Ageing.

USE PROTOCOL

1. Cleanse the skin with **Oti DLactic Soft Cleanser**, which eliminates dead cells and sebum. (Apply to dry skin, massage and then rinse with water, and dry)
2. Apply the **Peeling** gel gel to face and neck with brush and leave to act for 1 or 2 minutes. (Do not allow red erythema to form).
3. Rinse with water.

4. Apply **Peeling Cream** and leave to act.
- **Revitalisation:** apply and leave to act for 4 hours (rinse with water).
 - **Acne:** apply and leave to act for 2 hours (rinse with water).
 - **Marks:** apply and leave to act for 3-4 hours (rinse with water)..

FREQUENCY OF APPLICATION

Repeat treatment every 28 days.

From 2nd to 8th day

1. Wash face with Delicate Neutral Soap.
2. Apply **Oti Resvital cream**.

From 8th to 20th day

1. Wash face with Delicate Neutral Soap
2. Wash face every other day with **Oti DLactic Soft Cleanser**.

The therapy is carried out depending on the pathology:

Revitalisation:

Apply **Oti Resvital cream** in the morning.

Macchie:

Apply **Oti Resvital cream** in the morning.
Apply **Oti Spot Cream** in the evening.

Acne:

Apply **Oti Resvital cream** in the morning.
Apply **Oti Impur Gel** in the evening.

HOME PRODUCTS

Anti-acne:

OTI IMPUR GEL

Magnesium Ascorbyl Phosphate, Alpha Lipoic Acid, Azelaic Acid, Glycolic Acid

Gel containing Magnesium Ascorbyl Phosphate (Vitamin C), Glycolic Acid, Alpha Lipoic Acid and Azelaic Acid. The product develops considerable Antioxidising and corrective effects on existing damage (acne even in active phase). The light fluid formula allows use as daily treatment or as an intensive treatment. The product is not photosensitive and can easily be used by UV-lamp users. It is a rapidly absorbed anti-acne gel that also intensely corrects marks and wrinkles. It can be applied year-round alone or as an aid for other treatments.

Anti-Marks:

OTI SPOT CREAM

Arbutin, Magnesium Ascorbyl Phosphate, Phytic Acid, Lactic Acid, Vitamin E Acetate

Thanks to the combined action of Arbutin, Phytic Acid, Magnesium Ascorbyl Phosphate (Vit. C) this special cream is especially indicated for all types of skin that have pigmentation irregularities. It can be used to lighten hyperchromia epidermis marks of varying aetiology. Continuous use may help to solve this condition and improve the presence of small wrinkles at the same time. It is especially recommended as an aid for professional depigmentation treatment such as chemical peeling. Initially apply once a day (preferably in the evening); then progress to 2 applications per day.

Moisturising Cream:

OTI RESVITAL CREAM

Moisturising cream containing Resveratrol, α -Lipoic Acid, Vitamins A, C, E, and epidermis lipids, for deep, protective Antioxidising moisturisation, stimulating epidermis regeneration. Adaptable for all types of skin, even the most sensitive and intolerant. To be applied twice a day for the first 10 days then once a day.
